

Reed fence series — supplier questions

We're building a separate web page for each reed-fence type. For Google/AI search we need

factual, specific answers — what each version is, what makes it different, and who it's for.

Please answer as plainly as possible (numbers where you can). Estimates are fine — just mark them.

The series (6 versions):

1. **Extra-thick peeled reed (8–10 mm)**
 2. **Thick peeled reed (5–8 mm)**
 3. **High-density fine peeled reed (3–6 mm)**
 4. **Unpeeled thick reed (natural skin on)**
 5. **Half-round / split reed**
 6. **Japanese-style reed bound with bamboo**
-

Part A — Fact table (please fill one column per version)

Easiest way: copy this into Excel and fill a column for each of the 6 versions.

Field	What we need
Item / model code	Your internal code
Reed species & origin	e.g. <i>Phragmites australis</i> , region/country, harvest season
Reed diameter	mm range (confirm the ones in the names)
Peeled / unpeeled / split	and what that means for this item
Density	reeds per running metre or kg per m ² (so we can describe how "full" it is)
Opacity / privacy	Can you see through it? Roughly what % closed? Are there visible gaps between stems?
Wind	Does it block wind, or let wind pass through?
Wires	material (galvanised?), number of wire rows top-to-bottom, wire gauge
Binding	single or double wire per row? machine-woven or hand-bound?
One-sided or two-sided	Is the "good" face one side only, or both sides the same?
Heights available	cm (e.g. 90/100/120/150/180/200)
Roll length	standard length(s) in m
Weight	per roll and per m ²
Lifespan outdoors	realistic years in a normal European garden
How the colour ages	does it grey/fade? how fast, and to what colour?
Treatment	any oil/coating/anti-mould, or 100% natural?
Best use cases	e.g. garden boundary, balcony, pool, terrace, commercial
Price tier	relative: budget / mid / premium (and rough price index vs the others)
MOQ	minimum order
Packing	roll size packed, pcs per pallet, pcs per 20ft & 40ft container

Field	What we need
Custom options	custom heights/lengths? private label / branding?
Certificates	any (FSC, fumigation, phytosanitary, etc.)

Part B — "Why choose this one" (1–2 sentences per version)

For **each** of the 6, please answer:

1. **In one line, what is this version and what makes it different from the others?**
2. **Why would a customer pick this one specifically?** (the single biggest reason)
3. **What is the main trade-off vs the neighbouring versions?** (e.g. cheaper but thinner, or denser but heavier)
4. **Who is it NOT right for?**

Version-specific things we'd like clarified:

- **Extra-thick peeled (8–10 mm)** — Is this the most private/"most closed" option? Heaviest? Longest-lasting?
- **Thick peeled (5–8 mm)** — Is this the everyday best-seller? What makes it the "default" choice?
- **High-density fine (3–6 mm)** — Why choose fine reed? Is it about a smoother, more refined look rather than privacy? Is it more or less closed than the thick peeled?
- **Unpeeled thick reed** — What does keeping the skin on change in practice (look, lifespan, mould risk, smell, price)? Is it cheaper or dearer than peeled?
- **Half-round / split reed** — Why split the reed? Flatter face, less depth, lower shipping weight, lower price? Is it as private as round reed?
- **Japanese-style with bamboo** — What bamboo is used for the binding, and what's the binding pattern? Is this mainly decorative, or also full privacy? Premium-priced?

Part C — Series-level questions (answer once for the whole range)

1. **Which version is your best-seller**, and which is the cheapest / which is the most premium?
2. **Which is the most "closed" — no gaps, maximum privacy** — and which lets the most light/air through?
3. **Peeled vs unpeeled in real terms** — difference in lifespan, mould resistance, smell, and how the colour changes over the years?
4. **Which versions are safe near a swimming pool / on the coast** (salt, chlorine, constant damp)?
5. **How is each one fixed** to a fence/railing (wire ties, battens)? Any difference between versions?
6. **Any version that is heavier/denser** and therefore needs a stronger supporting frame?

Why we ask these (for our side)

Each fact above becomes either a spec line or an **FAQ answer** on that product's page. The questions that buyers actually type — *"Can you see through reed fencing?", "How long does reed fencing last?", "What's the difference between peeled and unpeeled reed?", "Which reed fence gives the most privacy?"*,

"Is reed fencing wind-resistant?" — are answered directly on the page (and tagged as FAQ data so Google and AI assistants can quote them). That's why the **opacity / privacy**, **lifespan**, and **why-choose** answers matter most.
